

$$\frac{3b-2a}{2} + \frac{3a-b}{6} \quad \text{を計算しなさい。}$$

$$\frac{3b-2a}{2} + \frac{3a-b}{6} = \frac{3(3b-2a)}{6} + \frac{3a-b}{6}$$

$$= \frac{3(3b-2a) + (3a-b)}{6}$$

$$= \frac{9b-6a+3a-b}{6}$$

$$= \frac{-3a+8b}{6}$$
